

2-minute pitch

In your groups, prepare & record a 2-minute YC Demo day pitch for an AI application you could build:

30 seconds: What's the problem? Who has it? (Be specific: industry, role, pain point)

45 seconds: What's your AI approach? (Workflow? Agent? Classical prediction?)

30 seconds: Why now, why AI, how does this remove scale or scope constraints?

15 seconds: What is the core risk (e.g hallucination, escalation failure etc) and the mitigation

We'll hear 3–4 pitches. Feedback from the room.

YC Demo Day Pitch Deck

Same visual asset used during the 2-minute pitch (1–4 slides max, YC style, minimal). Should cover:

- Your product, what you are going to make. Who is the user and how do they solve this today?
The moat (Your advantage). Tradeoffs and tensions.
- Technical Artifact (MVP Link or Architecture Diagram): A prompt chain or "Vibe Code" Prototype using no-code tools that demonstrates the core interaction, Or An agentic workflow diagram (detailed flowchart) showing user input, the LLM reasoning step, specific tools/APIs the agent calls (Retrieval, memory etc) and where the "Human in the Loop" sits if one exists.
- Include the OneDrive pitch video link in the deck (ensure to make it public to view)
- Deck is submitted online on Moodle.

Don't forget the illusion gap

FROM SESSION 3

The discrepancy between what the team produces and what individuals understand.

IN ENTERPRISE AI MARKETING

A company's AI campaigns may look polished, but does the team understand **why they work**?

IN AGENTIC CUSTOMER SERVICE

An AI agent may resolve 80% of issues, but does the organization understand **when and why it fails**?

Organizations that win are those that close this gap: through governance, learning loops, and human oversight.
